**FOR IMMEDIATE RELEASE**

## **ShockWatch And Glacier® Computer Sign Global Distribution Agreement**

DALLAS, TX (June 12, 2007) — ShockWatch, a leader in developing and manufacturing damage prevention products, announces its new global distribution agreement with Glacier® Computer, an Amherst, N.H.-based developer of rugged industrial computer systems. The companies will leverage ShockWatch's international distribution network to offer Glacier's Everest™ computer product line outside of the U.S.

Everest rugged mobile computers are specially engineered for use in the warehousing, distribution, manufacturing, construction and oil drilling industries, where ShockWatch already serves as a market leader. Everest computers mount easily onto forklifts, fleet vehicles or fixed locations to make everyday computing tasks easier, more efficient and more accurate — even in the harshest environments. Available with either a 10- or 12-inch display, the compact touch screen design tolerates extreme temperatures, humidity, dust and vibration. Numerous configuration options enable powerful, flexible computing that supports software applications used for inventory management, data collection and other operations.

"ShockWatch already manufactures and distributes a broad line of Equipment Monitors that our customers use to capture operational data on their forklifts," said Jeff Kilpatrick, Vice President of Marketing at ShockWatch. "The mobile computing capabilities and rugged design of the Everest line make it a logical addition to our offerings for use in the same environments. Both the ShockWatch line and Glacier's Everest line are engineered for direct operator use and provide managers with the information they need to make smarter decisions as they supervise operations everyday."

"We are excited about the opportunity to partner with ShockWatch in this global expansion project," said Ron D'Ambrosio, President of Glacier. "The ShockWatch international distribution network will allow us to bring the power and value of the product to a new audience."

### **About ShockWatch**

ShockWatch has been specializing in damage prevention since 1976, offering Shipping & Handling Monitors and Equipment Monitors for use in thousands of applications in a wide variety of industries, including automotive, aerospace, defense, logistics, marine, utilities, medical and manufacturing. ShockWatch products are used to monitor the handling of goods
